

Community- and farmer-based management of animal African trypanosomosis in cattle

Jérémy Bouyer, Fanny Bouyer, Meritxell Donadeu, Tim Rowan, Grant Napier. GALVmed and DFID acknowledged.

Tsetse eradication is impossible in many parts of Africa given environmental, political, and economic circumstances. Animal African trypanosomosis (AAT) control then relies on implementation of local, integrated control strategies by communities or farmers that must take into account the eco-epidemiological context and the cattle rearing system to be sustainable.
